Art Unit: 2834

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3, 6, 10, 11, 15, 20 and 21 are rejected under 35 U.S.C. 102(a) as being anticipated by Tada, Dai, Endoh or Strauss.

Each reference teaches multiple SAW elements with balanced/unbalanced conversions at various input/output terminals.

Claims 4, 5 and 16-19 are rejected under 35 U.S.C. 102(a) as being anticipated by Tada (fig. 18).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 7-9 and 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Toda, Dai, Endoh or Strauss.

The references each teach the basic claimed SAW device including balanced/unbalanced terminals. They do not explicitly show flip chip mounting in a box container, different electrode thicknesses, DCS and PCS configurations. However, flip-chip box housing is well known per se. The same is true of altering electrode thickness to fine tune resonator characteristics, PCS and

DCS configurations. (Official notice taken). Thus, selection of these alternations/additions for their known, expected benefits would have been obvious to one of ordinary skill in the art. For example, any SAW device must be protected from hostile environments. PCS and DCS configurations are selected based on their known benefits.

Further, cited of interest are Takamine, Edmonson, Abe, Kawakatsu and Tuguchi.

The drawings are objected to due to the foreign language nomenclature use to label the figures.
